DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of group II, claims 7-8, in the reply filed on 07/30/04 is acknowledged.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 7 is rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No. 6,496,053 to Daubenspeck et al.

Regarding claim 7, Daubenspeck et al. (figures 22-25) teach an integrated circuit adapted to specific needs, comprising a stack of insulating layers (dielectric layer [2203]), each layer being associated with a determined metallization level (metal layer of [2100]), metal areas of the last metallization level forming electric contacts of the integrated circuit, comprising:

pairs of metal regions (pairs of lower metal regions of [2100]) of the penultimate metallization level having a facing edge and connected to components of the integrated circuit; insulating portions (portions of dielectric layer [2203]) covering the edges of the metal regions (lower regions of [2100]) of determined pairs according to the specific needs; and

Art Unit: 2811

metal portions (upper portions of [2100]) of the last metallization level which cover the facing edges of the metal regions (middle metal regions of [2100]) of all pairs and which connect the metal regions of the pairs other than the determined pairs (lower regions of [2100]).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 6,496,053 to Daubenspeck et al. in view of US Patent No. 6,521,996 to Seshan.

Regarding claim 8, Daubenspeck et al. differ from the claimed invention by not showing a passivation layer covering the metal portions. However, Seshan (figure 2a) teaches a passivation layer (214) covering the metal portions. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teaching of Seshan into the device taught by Daubenspeck et al. because it protects the metal layers.
